## **1.INTRODUCTION**

### **1.1 Project Overview**

In this project, two datasets name fruit dataset and vegetable dataset are collected. The collected datasets are trained and tested with deep learning neural network named Convolutional Neural Networks (CNN). First, the fruit dataset is trained and then tested with CNN. It has 6 classes and all the classes are trained and tested. Second, the vegetable dataset is trained and tested. The software used for training and testing of datasets is Python. All the Python codes are first written in Jupyter notebook supplied along with Anaconda Python and then the codes are tested in IBM cloud. Finally a web based framework is designed with help Flask a Python library. There are 2 html files are created in templates folder along with their associated files in static folder. The Python program 'app.py' used to interface with these two webpages is written in Spy-der-Anaconda python and tested.

### **1.2 Purpose**

This project is used to test the fruits and vegetables samples and identify the different diseases. Also, this project recommends fertilizers for predict diseases

## **2. LITERATURE SURVEY**

### **2.1 Existing problem**

[1] The proposed method uses SVM to classify tree leaves, identify the disease and suggest the fertilizer. The proposed method is compared with the existing CNN based leaf disease prediction. The proposed SVM technique gives a better result when compared to existing CNN. For the same set of images, F-Measure for CNN is 0.7 and 0.8 for SVM, the accuracy of identification of leaf disease of CNN is 0.6 and SVM is 0.8.

Advantages : The prediction and diagnosing of leaf diseases are depending on the segmentation such as segmenting the healthy tissues from diseased tissues of leaves.

Disadvantages : This further research is implementing the proposed algorithm with the existing public datasets. Also, various segmentation algorithms can be implemented to improve accuracy. The proposed algorithm can be modified further to identify the disease that affects the various plant organs such as stems and fruits.

[2] Detection of Leaf Diseases and Classification using Digital Image Processing International Conference on Innovations in Information, Embedded and Communication Systems (ICIIECS), IEEE, 2017.

Advantages: The system detects the diseases on citrus leaves with 90% accuracy.

Disadvantages: System only able to detect the disease from citrus leaves. The main objective of this paper is image analysis & classification techniques for detection of leaf diseases and classification. The leaf image is firstly preprocessed and then does the further work. K-Means Clustering used for image segmentation and then system extract the GLCM features from disease detected images. The disease classification done through the SVM classifier.

### **2.3 Problem Statement Definitions**

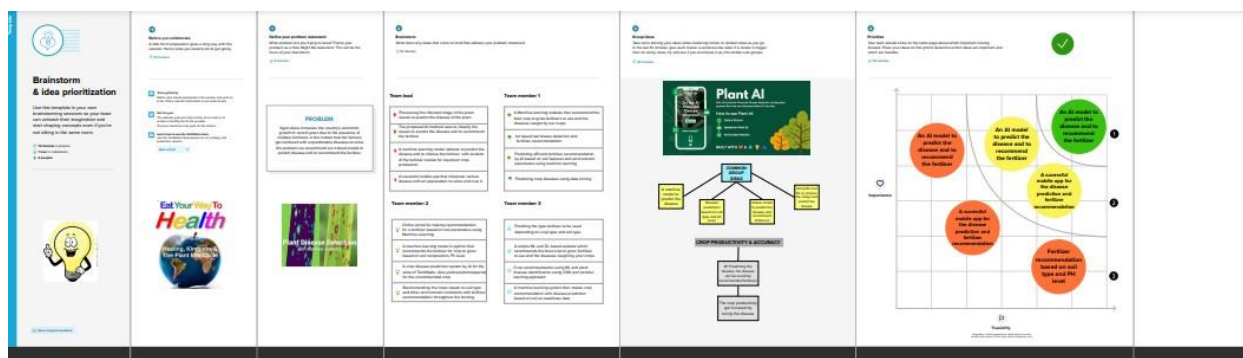

The global agricultural powerhouse is considered as a key for human lives. In the recent years due to the presence of multiple fertilizers in the market, so the farmers get confused also there is lots of unpredicted diseases in the farming. To overcome this problem, we recommend our trained model to predict the disease exactly and to recommend the fertilizer to cure the disease.

### 3. IDEATION & PROPOSED SOLUTION

#### 3.1 Empathy Map Canvas

#### 3.2 Ideation & Brainstorming

### 3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (problem to be solved)	<ul style="list-style-type: none"><li>- In the recent years due spread of multiple diseases in the farming and the availability of multiple fertilizers in the market the farmers get confused to predict the disease and to use the fertilizers.</li></ul>
2.	Idea / Solution Description	<ul style="list-style-type: none"><li>- When the user inputs an image of a diseased plant leaf, the application predicts the type of disease, display the result along with the little background about the disease and suggestions to cure it.</li><li>- Deep learning techniques are used to identify the diseases and suggest appropriate fertilizer that can be taken for those diseases.</li></ul>

3.	Novelty / Uniqueness	<ol style="list-style-type: none"> <li>1. The classification technique is divided into the following steps: <ol style="list-style-type: none"> <li>a. Image acquisition</li> <li>b. Pre-processing</li> </ol> </li> <li>2. Instant solutions for farmer's queries.</li> </ol>
4.	Social Impact / Customer satisfaction	<ol style="list-style-type: none"> <li>1. Fertilizers are a supplements supply to soil nutrients, build up soil fertility in order to support plant nutrients and increase plants productivity.</li> <li>2. Nowadays, artificial intelligence and sensor technology play a vital role in the agriculture field. The use of excess insecticides and fertilizers in farming poses a risk to human health.</li> </ol>
5.	Business Model (Revenue Model)	<ol style="list-style-type: none"> <li>1. Helpline support for resolving app related issues.</li> <li>2. Service availability depends on the plan subscribed by the farmers.</li> </ol>

### 3.4 Problem Solution Fit

Problem-Solution fit canvas 2.0		FERTILIZER RECOMMENDATION FOR DISEASE PREDICTION	
Define CS, fit into CC	<b>1. CUSTOMER SEGMENT(S)</b> Who is your customer? Farmers are the customers to use this application to predict the unknown disease by adding the images to this application.	<b>6. CUSTOMER CONSTRAINTS</b> What constraints prevent your customers from taking action or limit their choices of solutions? <b>We farmers to use this application with the basic knowledge. Customers are asked to check their fertilizers as we recommended with agricultural experts.</b>	<b>5. AVAILABLE SOLUTIONS</b> Which solutions are available to the customers when they face the problem or need to get the job done? In the past there is an application but they are not effective as we recommended. But if there is any new unknown diseases the trained model gets confused.
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> Which jobs-to-be-done (or problems) do you address for your customers? The must has to image of the plant leaves and upload to the application that the trained model gets process the image and predict the disease.	<b>9. PROBLEM ROOT CAUSE</b> What is the real reason that this problem exists? In the recent days new diseases enters in the farming and becomes unpredictable and there are too many fertilizers in the market. That's the reason that the problem exists	<b>7. BEHAVIOUR</b> What does your customer do to address the problem and get the job done? <b>If there is unpredicted disease and were no agricultural experts then the farmers are asked to address our trained model and makes use of this to predict the disease and to use the fertilizer to recover from the disease.</b>
Focus on J&P, tap into BE, understand RC	<b>3. TRIGGERS</b> What triggers customers to act? The customers can see efficiency of the application where it can be used by neighbors.	<b>10. YOUR SOLUTION</b> If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. It predicts the disease exactly and also to recommend the fertilizer it used to recover from the disease earlier	<b>8. CHANNELS of BEHAVIOUR</b> <b>8.1 ONLINE</b> What kind of actions do customers take online? The customer add an image to the portal and disease gets predicted, fertilizer recommended.
Identify strong TR & EM	<b>4. EMOTIONS: BEFORE / AFTER</b> How do customers feel when they face a problem or a job and afterwards? When there is unknown new disease customer face the problem		<b>8.2 OFFLINE</b> What kind of actions do customers take offline? <b>No actions there in offline that can be implemented in future.</b>
			Extract online & offline CH of BE

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	No Registration needed.
FR-2	Image	Image of the affected plant leaf is needed to predict the disease
FR-3	PC / Desktop or Mobile	Device needed to run the application

### 4.2 Non-Functional Requirement

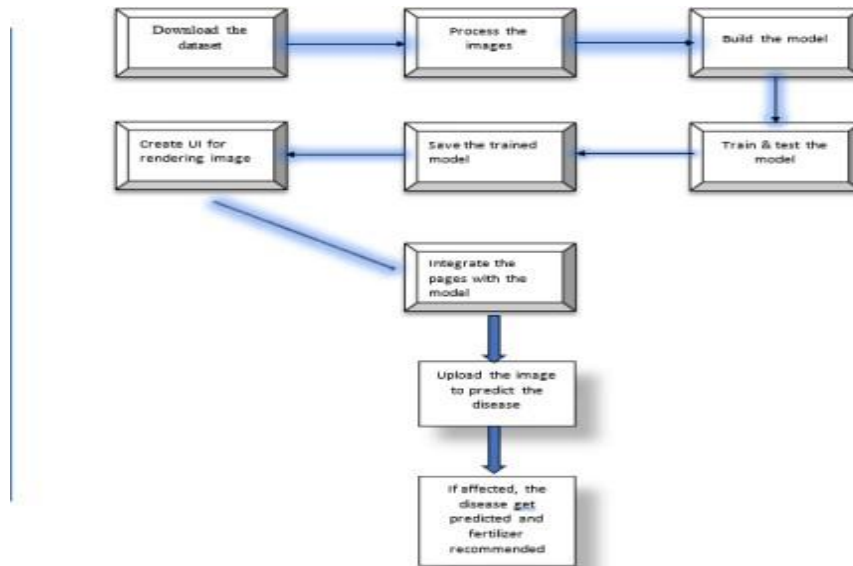

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	Used to predict disease affected on plants
NFR-2	<b>Security</b>	No security needed while using this application
NFR-3	<b>Reliability</b>	Reliable on anytime anywhere with the environment
NFR-4	<b>Performance</b>	High performance to predict disease which is difficult to predict by the farmers
NFR-5	<b>Availability</b>	Available for customers on both web and mobile
NFR-6	<b>Scalability</b>	Scalable with predicting diseases which is known or defined earlier, but not for the new diseases

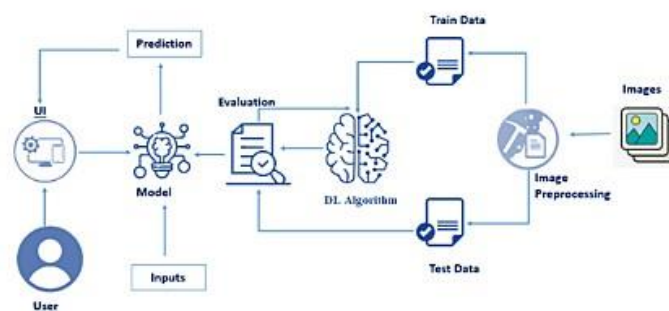

## 5. PROJECT DESIGN

### 5.1 Data Flow Diagram

### 5.2 Solution & Technical Architecture

### 5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Dashboard	USN-1	As a user, I can use this user-friendly application without any registration and login	I can access this dashboard	High	Sprint-2
	Predict page	USN-2	As a user, I can upload the image of the infected plant leaf	I can access this predict page	Medium	Sprint-3
	Solution	USN-3	As a user, I can get the solution with the trained model	I can access this on predict page	Medium	Sprint-3
Customer (Web user)	Dashboard	USN-1	As a user, I can use this user-friendly web application without any registration and login	I can access this dashboard	High	Sprint-2

## 6.PROJECT PLANNING & SCHEDULING

### 6.1 Sprint Planning

1. Planning is a crucial role in project management because it allows teammembers to schedule their time on the project.

2. This activity demonstrates how the team members assigned and completed various tasks!

3. In Project we can Split into the Four Step of Phrases are

- Phrase 1: Information Collection and Requirement Analysis
- Phrase 2: Project Planning and Developing Modules
- Phrase 3: Implementing the High Accuracy Machine Learning Algorithm to Perform
- Phrase 4: Deploying the Model on Cloud and Testing the Model and UI Performance

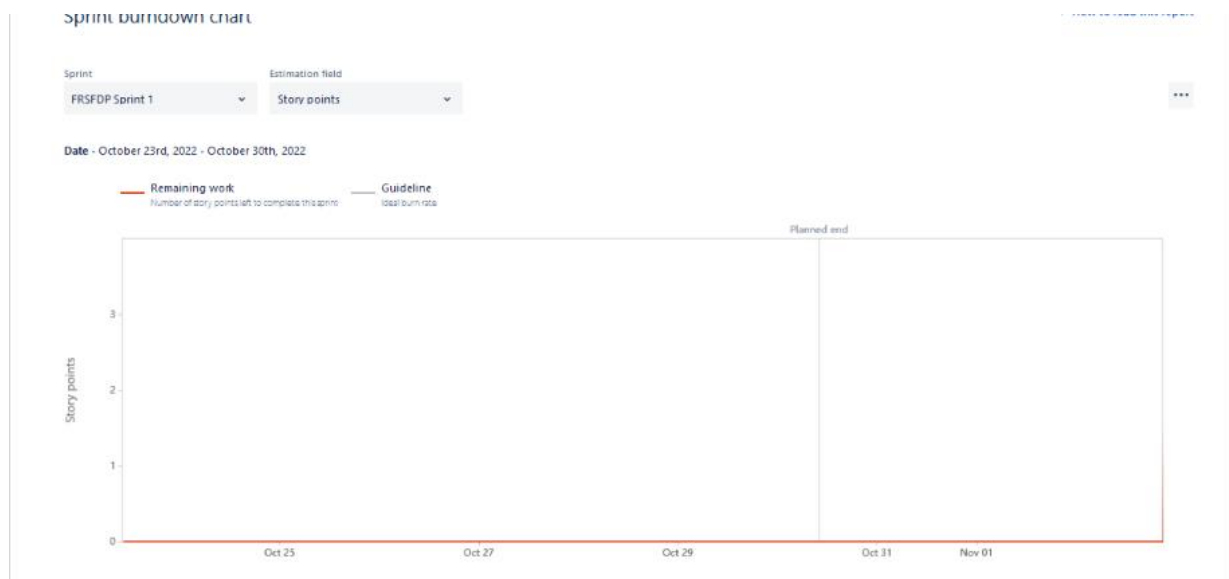

### 6.1 Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Image Processing	USN-1	As a user, I can process and retrieve the useful information about the images.	1	Low	Sharubala/abinaya/sheela/muthumeenakshi
Sprint-2	Model Building for Fruit Disease Prediction	USN-2	As a user, I can be able to predict fruit disease using this model.	1	Medium	Sharubala/abinaya/sheela/muthumeenakshi
Sprint-2	Model Building for Vegetable Disease Prediction	USN-3	As a user, I can be able to predict vegetable disease using this model.	2	Medium	Sharubala/abinaya/sheela/muthumeenakshi
Sprint-3	Application Building	USN-4	As a user, I can see a web page for Fertilizers Recommendation System for Disease Prediction.	2	High	Sharubala/abinaya/sheela/muthumeenakshi
Sprint-4	Run the Model on IBM Cloud	USN-5	As a user, I can save the information about Fertilizer and crops on IBM cloud.	2	High	Sharubala/abinaya/sheela/muthumeenakshi

## 6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	04 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	10 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	17 Nov 2022

## 6.3 Reports From JIRA

Velocity report

[How to read this report](#)

Sprint	Commitment	Completed
FRSFDP Sprint 1	0	4

## 7. CODING & SOLUTIONING

### Home

Basic information about the website that we have created and deployed.

### Predict

In the prediction page the infected plant leaf gets predicted and the precautions are measured.

## 8. TESTING

### 8.1 Test Cases

Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
HomePage_TC_001	UI	Home Page	Read the informations in the project	None	No steps required	None	Should display the information about the project	Working as expected	Pass		No		Karthikyan.S
PredictPage_TC_001	Functional	Home Page	Verify the UI elements in Login/Signup popup		1.upload the image 2.Predict the image uploaded	None	The disease gets predicted with the recommendation of fertilizer	Working as expected	Pass	Accuracy:98%	No		Shankar.M

### 8.2 User Acceptance Testing

#### 1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Fertilizer Recommendation for Disease Prediction project at the time of the release to User Acceptance Testing (UAT).

#### 2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	7	2	0	1	10
Duplicate	2	0	3	0	5
External	3	2	0	2	7
Fixed	10	3	5	15	33
Not Reproduced	0	0	0	0	0
Skipped	0	1	0	1	2
Won't Fix	0	0	0	0	0

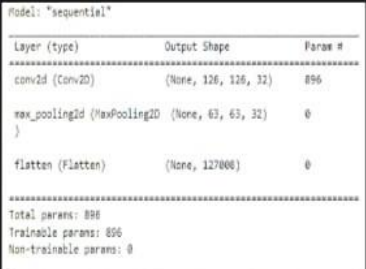

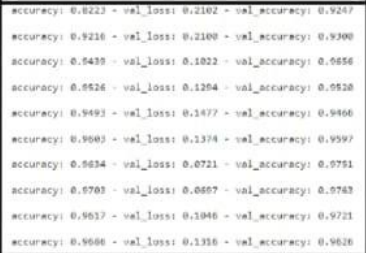

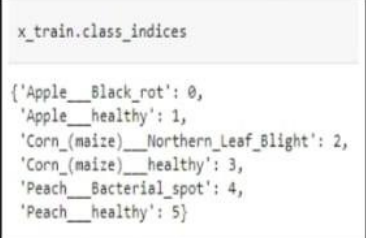

#### 3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	6	0	0	6
Client Application	10	1	0	10
Security	0	0	0	0
Outsource Shipping	5	0	0	5
Exception Reporting	6	0	0	6
Final Report Output	5	0	0	5
Version Control	1	0	0	1

## 9. RESULTS

### 9.1 Performance Metrics

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Model value - 896	 <pre> Model: "sequential" Layer (type)                Output Shape              Param # ----- conv2d (Conv2D)              (None, 126, 126, 32)     896 max_pooling2d (MaxPooling2D) (None, 63, 63, 32)       0 flatten (Flatten)             (None, 127808)           0 Total params: 896 Trainable params: 896 Non-trainable params: 0 </pre>

3.	Confidence Score (Only Yolo Projects)	Class Detected  Confidence Score - 96	 <pre> x_train.class_indices {'Apple__Black_rot': 0,  'Apple__healthy': 1,  'Corn_(maize)__Northern_Leaf_Blight': 2,  'Corn_(maize)__healthy': 3,  'Peach__Bacterial_spot': 4,  'Peach__healthy': 5} </pre>

## 10. ADVANTAGES & DISADVANTAGES

### Advantages:

- ✓ The system helps to compute the disease severity.
- ✓ It allows us to predict which crops would be appropriate for a given climate. Using the weather and disease related data sets, the crop quality can also be improved.
- ✓ The prediction and diagnosing of leaf diseases are depending on the segmentation such as segmenting the healthy tissues from diseased tissues of leaves.

### Disadvantages:

- ✓ Due to the changing climatic conditions, accurate results cannot be predicted by this system.
- ✓ System only able to detect the disease from citrus leaves.

## **11. CONCLUSION**

The model proposed here involves image classification of fruit datasets and vegetable datasets. The following points are observed during model testing and training:

- ✓ The accuracy of classification increased by increasing the number of epochs.
- ✓ For different batch sizes, different classification accuracies are obtained.
- ✓ The accuracies are increased by increasing more convolution layers.
- ✓ The accuracy of classification also increased by varying dense layers.
- ✓ Different accuracies are obtained by varying the size of kernel used in the convolution layer output.
- ✓ Accuracies are different while varying the size of the train and test datasets.

## **12. FUTURE SCOPE**

The proposed model in this project work can be extended to image recognition. The entire model can be converted to application software using python to exe software. The real time image classification, image recognition and video processing are possible with help OpenCV python library. This project work can be extended for security applications such as figure print recognition, iris recognition and face recognition.

    align:justify;">Agriculture is one of the major sectors worls
    wide. Over the years it has developed and the use of new
    technologies and equipment replaced almost all the traditional
    methods of farming. The plant diseases effect the production.
    Identification of diseases and taking necessary precautions is
    all done through naked eye, which requires labour and
    laboratries. This application helps farmers in detecting the
    diseases by observing the spots on the leaves, which inturn
    saves effort and labor costs.</div><br><br>
